1 Static Shock

Write what the `main` method will print out once it is executed. It might be helpful to draw box and pointer diagrams to keep track of variables. (Spring '15, MT1)

```java
public class Shock {
    public static int bang;
    public static Shock baby;
    public Shock() {
        this.bang = 100;
    }
    public Shock (int num) {
        this.bang = num;
        baby = starter();
        this.bang += num;
    }
    public static Shock starter() {
        Shock gear = new Shock();
        return gear;
    }
    public static void shrink(Shock statik) {
        statik.bang -= 1;
    }
    public static void main(String[] args) {
        Shock gear = new Shock(200);
        System.out.println(gear.bang);          _____
        shrink(gear);
        shrink(starter());
        System.out.println(gear.bang);          _____
    }
}
```

2 Horse-o-Scope

Given the following program, draw out the box and pointer diagram that results from executing the `main` method. What is the output printed by the program? (Summer '16, MT1)

```java
public class Horse {
    Horse same;
    String jimmy;

    public Horse(String lee) {
        jimmy = lee;
    }

    public Horse same(Horse horse) {
        if (same != null) {
            Horse same = horse;
            same.same = horse;
            same = horse.same;
        }
        return same.same;
    }

    public static void main(String[] args) {
        Horse horse = new Horse("youve been");
        Horse cult = new Horse("horsed");
        cult.same = cult;
        cult = cult.same(horse);
        System.out.println(cult.jimmy);
        System.out.println(horse.jimmy);
    }
}
```

Program Output:

3   Give em the 'Ol Switcheroo

For each function call in the main method, write out the x and y values of both foobar and baz after executing that line. (Spring '15, MT1)

```java
public class Foo {
    public int x, y;

    public Foo (int x, int y) {
        this.x = x;
        this.y = y;
    }

    public static void switcheroo (Foo a, Foo b) {
        Foo temp = a;
        a = b;
        b = temp;
    }

    public static void fliperoo (Foo a, Foo b) {
        Foo temp = new Foo(a.x, a.y);
        a.x = b.x;
        a.y = b.y;
        b.x = temp.x;
        b.y = temp.y;
    }

    public static void swaperoo (Foo a, Foo b) {
        Foo temp = a;
        a.x = b.x;
        a.y = b.y;
        b.x = temp.x;
        b.y = temp.y;
    }

    public static void main (String[] args) {
        Foo foobar = new Foo(10, 20);
        Foo baz = new Foo(30, 40);
        switcheroo(foobar, baz);    foobar.x: ___ foobar.y: ___ baz.x: ___ baz.y: ___
        fliperoo(foobar, baz);      foobar.x: ___ foobar.y: ___ baz.x: ___ baz.y: ___
        swaperoo(foobar, baz);      foobar.x: ___ foobar.y: ___ baz.x: ___ baz.y: ___
    }
}
```

4   Quik Maths

What would the contents of the array be after being run through these functions in the *main* method? (Fall '16, MT1)

```java
public class QuikMaths {
    public static void mulitplyBy3(int[] A) {
        for (int x: A) {
            x = x * 3;
        }
    }

    public static void multiplyBy2(int[] A) {
        int[] B = A;
        for (int i = 0; i < B.length; i+= 1) {
            B[i] *= 2;
        }
    }

    public static void swap (int A, int B ) {
        int temp = B;
        B = A;
        A = temp;
    }

    public static void main(String[] args) {
        int[] arr;
        arr = new int[]{2, 3, 3, 4};
        multiplyBy3(arr);

        /* Value of arr: {_____} */

        arr = new int[]{2, 3, 3, 4};
        multiplyBy2(arr);

        /* Value of arr: {_____} */

        int a = 6;
        int b = 7;
        swap(a, b);

        /* Value of a: _____   Value of b: _____ */
    }
}
```
